## **Births: Final Data for 2012**

by Joyce A. Martin, M.P.H.; Brady E. Hamilton, Ph.D.; Michelle J.K. Osterman, M.H.S.; Sally C. Curtin, M.A. and T.J. Mathews, M.S., Division of Vital Statistics.

A reformatted, typeset version of this report will replace the current version.

#### **Births: Final Data for 2012**

by Joyce A. Martin, M.P.H.; Brady E. Hamilton, Ph.D.; Michelle J.K. Osterman, M.H.S.; Sally C. Curtin, M.A., and T.J. Mathews, M.S., Division of Vital Statistics

#### **Abstract**

Objectives--This report presents 2012 data on U.S. births according to a wide variety of characteristics. Data are presented for maternal age, live-birth order, race and Hispanic origin, marital status, attendant at birth, method of delivery, period of gestation, birthweight, and plurality. Birth and fertility rates are presented by age, live-birth order, race and Hispanic origin, and marital status. Selected data by mother's state of residence and birth rates by age and race of father also are shown. Trends in fertility patterns and maternal and infant characteristics are described and interpreted.

Methods--Descriptive tabulations of data reported on the birth certificates of the 3.95 million births that occurred in 2012 are presented.

Results—3,952,841 births were registered in the U.S. in 2012. The general fertility rate declined to 63.0 per 1,000 women aged 15–44. The teen birth rate fell 6%, to 29.4 per 1,000 women. Birth rates declined for women in their twenties and increased for women 30-44 years. The total fertility rate (estimated number of births over a woman's lifetime) declined 1% to 1,880.5 per 1,000 women. The rate of births to unmarried women declined; the percentage of births to unmarried women was essentially stable at 40.7% but the number of births to unmarried women increased slightly. The cesarean delivery rate was unchanged at 32.8%. The preterm birth rate declined for the sixth straight year to 11.55%; the low birthweight rate declined slightly to 7.99%. The twin birth rate was stable at 33.1 per 1,000 births; the rate of triplet and higher-order multiple births dropped 9% to 124.4 per 100,000 total births.

Keywords: birth certificate, maternal and infant health, birth rates, maternal characteristics

## **Highlights**

A total of 3,952,841 **births** were registered in the United States in 2012, slightly fewer births (749) than in 2011. Births declined 1% for non-Hispanic white and Hispanic women and were essentially unchanged for non-Hispanic black women from 2011 to 2012.

The 2012 **general fertility rate** declined to 63.0 births per 1,000 women aged 15–44, another historic low for the United States. **The total fertility rate** declined 1%, to 1,880.5 births per 1,000 women in 2012.

The **birth rate for teenagers** aged 15-19 dropped 6% from 2011 to 2012, to 29.4 per 1,000 -- the lowest rate ever reported for the U.S. Rates were down for age groups 15-17 and 18-19, and for nearly all race and Hispanic origin groups.

**Birth rates** declined among women in their early 20s between 2011 and 2012 to a new record low. The rate was also down for women 25-29 years, but increased for women aged 30 to 44 years. Birth rates for the youngest (under 15 years) and the oldest mothers (45 years and higher) were unchanged.

The **mean age of mother** at first birth rose again, to 25.8 years in 2012, up from 25.6 years in 2011.

The 2012 U.S. **cesarean delivery rate** was unchanged at 32.8%. The cesarean rate rose nearly 60% from 1996 to 2009, declined slightly from 2009 to 2010, and has been stable since.

The birth rate for unmarried women fell for the fourth consecutive year in 2012 to 45.3 per 1,000 unmarried women aged 15-44 years. The percentage of births to unmarried women was unchanged from 2011 at 40.7%, but the number of nonmarital births increased slightly, by less than 1%, to 1,609,619.

**The preterm birth rate** (less than 37 weeks) declined for the sixth straight year, to 11.55% of all births in 2012, down 2% from 2011 and 10% from the 2006 peak. Rates declined for non-Hispanic white and non-Hispanic black births and for most maternal age groups from 2011 to 2012.

The 2012 rate of **low birthweight** (less than 2,500 grams) was 7.99%, down slightly from 2011 (8.10%) and 3% lower than the 2006 high (8.26%).

The 2012 **twin birth rate** was 33.1 per 1,000 total births, and was essentially unchanged from 2009-2011. The **triplet and higher-order multiple birth rate** (triplet/+) dropped 9% in 2012 to 124.4 per 100,000 births and is down by more than one-third since the high in 1998 (193.5); see Figure 1.

## Introduction

This report presents detailed data on numbers and characteristics of births in 2012, birth and fertility rates, maternal demographic and health characteristics, place and attendant at birth, and infant health characteristics. A report of preliminary birth statistics for 2012 presented data on selected topics based on a substantial sample (99.96%) of 2012 births (1). In addition to the tabulations included in this report, more detailed analysis is possible by using the natality publicuse file issued each year. The data file may be downloaded from

http://www.cdc.gov/nchs/data\_access/Vitalstatsonline.htm (2). The public-use file does not include geographic detail; a file with this information may be available upon special request (3). A data access and analysis tool, VitalStats, is also available from

http://www.cdc.gov/nchs/VitalStats.htm (4). VitalStats includes birth data for 1990 through

2012, with access to interactive, prebuilt tables. Users also can build tables using more than 100 variables from the natality public-use files and geographic information by state and for counties with populations of 100,000 or more.

## 1989 and 2003 revisions of U.S. Standard Certificate of Live Birth

This report includes 2012 data on items that are collected on both the 1989 revision of the U.S. Standard Certificate of Live Birth (unrevised) and the 2003 revision of the U.S. Standard Certificate of Live Birth (revised). The 2003 revision is described in detail elsewhere (5,6).

Thirty-eight states, the District of Columbia (DC), and three territories implemented the revised birth certificate as of January 1, 2012. The 38 revised states and DC represent 86% of all 2012 U.S. births. The revised reporting areas are: California, Colorado, Delaware, the District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Washington, Wisconsin, Wyoming, Guam, the Northern Marianas and Puerto Rico. One state, Virginia, implemented the revised birth certificate in 2012, but after January 1.

This report presents information on selected data items comparable between the 1989 and 2003 birth certificate revisions. Information on topics comparable between revisions but not presented in this report (e.g., day of birth, month of birth, and congenital anomalies) can be found in the Internet tables (See "List of Detailed Tables") and in the "Public use file" for each data year (2). Recent reports and data releases present information on items not previously available from The National Center for Health Statistics (e.g., use of infertility therapies, WIC food, source of payment for the delivery, maternal morbidity, and breastfeeding) for years 2009, 2010 and 2011 (7-11). A recent report also assesses the quality of the 2003 revised medical and health birth certificate data (12).

## **Methods**

Data shown in this report are based on 100% of the birth certificates registered in all states and DC. More than 99% of births occurring in this country are registered (13). Tables showing data by state also provide separate information for Puerto Rico, Virgin Islands, Guam, American Samoa, and Commonwealth of the Northern Marianas. These areas, however, are not included in totals for the U.S..

Race and Hispanic origin are reported independently on the birth certificate. In tabulations of birth data by race and Hispanic origin, data for Hispanic persons are not further classified by race because the majority of women of Hispanic origin are reported as white. Most tables in this report show data for the categories of non-Hispanic white, non-Hispanic black, and Hispanic.

Data for births are also presented in some tables for American Indian or Alaska Native (AIAN) and Asian or Pacific Islander (API); for specific Hispanic groups Mexican, Puerto Rican, Cuban, and Central and South American; and for other and unknown Hispanic. Data for AIAN and API births are not shown separately by Hispanic origin because the majority of these populations are non-Hispanic. Text references to black births and black mothers or to white births and white mothers are used interchangeably for ease in writing; see Technical Notes.

The 2003 revision of the U.S. Standard Certificate of Live Birth allows the reporting of more than one race (multiple races) for each parent (5) in accordance with the revised standards issued by the Office of Management and Budget (OMB) in 1997 (14). See Technical Notes and the User Guide (13) for detailed information on the 2012 multiple-race reporting area and methods used to bridge responses for those who report more than one race to a single race.

In this report, the total number of births includes births to women up to age 64. In tables that include age of mother, the oldest age group shown (40–54, 45-49, 45-54, or 50-54) includes births to mothers up to age 64. For information on levels of incomplete reporting by state, see Technical Notes and the User Guide (13). For information on the measurement of data items shown in this report and the Internet tables, imputation techniques used, computation of derived statistics, and definitions of terms, see the User Guide (13).

Birth and fertility rates for the specific Hispanic population groups (Mexican, Puerto Rican, Cuban, Central and South America, and other Hispanic populations) for 2010 – 2012 are based on population estimates derived from the American Community Survey (ACS), conducted by the U.S Census Bureau. Rates for the specific Hispanic population groups prior to 2010 are based on population estimates derived from the Current Population Survey (CPS). For more information about the populations for Hispanic groups, see Technical Notes and the 2011 User Guide (13).

## Demographic Characteristics

## Births and birth rates

A total of 3,952,841 births were registered in the United States in 2012, 749 fewer than in 2011 (3,953,590) (**Tables 1** and **5**; **Figure 2**). From 2007 through 2011, the number of births declined, falling steadily from 2007 through 2010, but the downward pace slowed from 2010 to 2012 (1). Among the three largest race and Hispanic origin groups, the number of births declined less than 1% for non-Hispanic black women and 1% for non-Hispanic white and Hispanic women from 2011 to 2012. The number of births also declined for AIAN women (1%), but rose 7% for API women. Among the specified Hispanic groups, births declined less than 1% for Puerto Rican women and 2-3% for Cuban, Mexican and Central and South American women between 2011 and 2012.

**Fertility rate** The 2012 general fertility rate (GFR) for the U.S. was 63.0 births per 1,000 women aged 15–44, down slightly (less than 1%) from the record low rate reported for the nation

in 2011 (63.2) (**Tables 1** and **5**; **Figure 2**). As with the number of births, the fertility rate declined steadily from 2007 through 2010, but the pace of the decline slowed from 2010 to 2012 (1)

The GFR declined for the three largest race and Hispanic origin groups from 2011 to 2012, down less than 1% non-Hispanic white, 1% for non-Hispanic black, and 2% for Hispanic women. The GFR also declined for AIAN women (1%). However, the rate for API women rose by 4%.

## Age of mother

Teenagers — The teenage birth rate was 29.4 births per 1,000 women aged 15-19 in 2012, another historic low for the nation and down by 6% from 2011 (31.3) (**Tables A, 3, 4, 7,** and **8**; **Figures 3 and 4**) (15-18]. This rate has fallen by over one-half since 1991 (61.8), when the long-term decline in births to teens began (15). From 2011, the number of births to teenagers aged 15-19 declined 7% to 305,388 in 2012, the lowest number since 1945 (280,997) and 41% lower than in 1991 (519,577).

Birth rates for teenagers aged 15-17 and 18-19 years were 14.1 births per 1,000 for the younger teens and 51.4 births per 1,000 for the older teens in 2012, down 8% and 5% respectively from 2011. Record lows were reached for both younger (15-17) and older (18-19) teens. Since 1991, the rate for teens aged 15-17 has fallen 63%, and the rate for teens aged 18-19, 45%. The birth rate for the youngest teenagers, aged 10-14, was unchanged (0.4 births per 1,000 in 2012). Among racial and ethnicity groups, rates for teenagers aged 15-19 declined for all groups from 2011 to 2012, with declines ranging from 3% for AIAN teenagers to 5% for API, and 6% - 7% for non-Hispanic white, non-Hispanic black, and Hispanic teenagers. Birth rates for teenagers aged 15-17 also declined for all racial and ethnicity groups in 2012; rates for ages 18-19 were down for all groups except for AIAN and API.

Women in their 20s — The birth rate for women aged 20–24 in 2012 was 83.1 births per 1,000 women in this age group, down 3% from 2011 (85.3) and a new record low for the U.S. (Tables 3, 4, 7, 8, and 12; Figure 4). The rate for women in this age group has declined steadily since 2007 at nearly 5 percent annually. The *number of births* to women in their early twenties declined 1% from 2011 to 2012, whereas their population rose 2% [17]. The rate for women aged 25–29 was 106.5 births per 1,000 women, down 1% from 2011 (107.2). The rate for women in this age group has declined 2 percent a year since 2008. The number of births to women in their late twenties also declined in 2012, down slightly (less than 1%) from 2011, whereas their population rose slightly (less than 1%).

Women in their 30s — The birth rate for women aged 30–34 was 97.3 births per 1,000 women in 2012, up 1% from 2011 (96.5). Both the number of births and the population of women in this age group increased in 2012, by 3% and 2%, respectively. The birth rate for

women aged 35–39 was 48.3 births per 1,000 women in 2012, up 2% from the 2011 rate (47.2). The number of births to women aged 35–39 rose 2% in 2012, whereas the population of women in this age group declined 1% (**Tables 2**, 6, and **II**) (17).

Women in their 40s — The birth rate for women aged 40–44 was 10.4 births per 1,000 women in 2012, up 1% from 2011 (10.3) (**Tables 4** and **8**). The rate for women in this age group has risen steadily since 2000 (8.0) by 2% annually (**Figure 4**). The number of births to women in their early forties rose 1%, whereas their population was essentially unchanged. The **birth rate** for women aged 45–49 (which includes births to women aged 50 and over) was 0.7 births per 1,000 women in 2012, unchanged since 2008. Births to women aged 45–49 declined 6% from 2011 to 2012, and the population for these women declined 2%. The increase in birth rates for women aged 35 and over during the last 20 years has been linked, in part, to the use of fertility-enhancing therapies (19).

Women aged 50 and over — 600 births occurred to women aged 50 and over in 2012, compared with 585 births in 2011 (**Tables 2** and **6**) (17). Since 1997, when data for women aged 50 and over became available again, the number of births to women in this age group has generally increased (from 144 births). In 2012, the **birth rate for women aged 50–54** was 0.5 births per 10,000 women, unchanged since 2006 (data not shown in tables). Because of the small number of births to women in this age group, the birth rate for women aged 50–54 is expressed per 10,000 women. For rates shown elsewhere in this report, births to women aged 50 and over are included with births to women aged 45–49 when computing birth rates by age of mother (the denominator for the rate is women aged 45–49).

#### Live-birth order

The 2012 first-birth rate for the U.S. was 25.2 births per 1,000 women aged 15–44, 1% less than the rate in 2011 (25.4) (**Tables 3, 7**, and **9**). First-birth rates declined for women aged 15–19, 20–24, and 25-29 (by 5%, 2%, and 1%, respectively), whereas rates for women aged 30–34 and 35–39 rose (2% and 3%, respectively). The rates for women aged 10–14 and 40 and over were unchanged.

Another useful measure for interpreting childbearing patterns is the **mean age at first birth**, which is the arithmetic average of the age of mothers at the time of birth, and is computed directly from the frequency of first births by age of mother. In 2012, the mean age of mother was 25.8 years, up from 25.6 years in 2011 and from 21.4 years in 1970 (**Tables 13**, **14**, and **I–1**) (18,20,21). The increase in the mean age in 2012 reflects, in part, the relatively large decline in births to women in their teen years and their 20s.

Mean age at first birth varied by race and Hispanic origin in 2012, from 22.5 years for AIAN women to 29.3 years for API women. The average ages at first birth for the three largest race and Hispanic origin groups, were 23.6 years for non-Hispanic black, 23.8 years for Hispanic, and

26.6 years for non-Hispanic white women (**Tables 13** and **14**). Among the specified Hispanic groups, average ages ranged from 23.2 years for Mexican women to 26.6 years for Cuban women. Average age at first birth increased for women in nearly all race and Hispanic origin groups in 2012.

## Total fertility rate

The 2012 total fertility rate (TFR) for the U.S. was 1,880.5 births per 1,000 women, 1% below the 2011 rate (1,894.5) (**Tables 4**, **8**, **13**, and **14**). After generally increasing from 1998 through 2007, the TFR has declined for each of the last 5 years. The TFR estimates the number of births that a hypothetical group of 1,000 women would have over their lifetimes, based on age-specific birth rates in a given year. Because it is computed from age-specific birth rates, the TFR is age-adjusted, and can be compared for populations across time, population groups, and geographic areas.

The TFRs declined for nearly all race and Hispanic origin groups in 2012, down 1-2% for non-Hispanic white, non-Hispanic black, Hispanic and AIAN women. The rate for API women rose 4% from 2011 to 2012, however

The 2012 U.S. TFR remained below "replacement" — the level at which a given generation can exactly replace itself (generally considered to be 2,100 births per 1,000 women). The TFR has been generally below replacement since 1971. With the exception of Hispanic women (reflecting mainly, rates for Mexican and other Hispanic women), the TFRs for all other groups were below replacement (**Tables 8** and **14**).

## Births and birth rates by state

The number of births declined between 2011 and 2012 in 7 states (Alabama, Connecticut, Georgia, Illinois, Mississippi, New Hampshire, and New Jersey), increased in 6 states (Arizona, Idaho, Kansas, Louisiana, North Dakota, and Texas), and was essentially unchanged in the 37 remaining states and DC; see **Tables 10** and **11** for 2012 data). Among U.S. territories, the number of births declined for all areas except Guam, where births rose 9% in 2012.

The GFR declined in 13 states in 2012 (Alabama, Alaska, Colorado, Connecticut, Florida, Georgia, Illinois, Massachusetts, Mississippi, Nevada, New Hampshire, New Jersey, and North Carolina), increased in 4 states (Idaho, Kansas, North Dakota, and Ohio), and essentially unchanged in the 33 remaining states and DC. Rates among the states ranged from 50.3 births per 1,000 women aged 15–44 in New Hampshire, to 83.1 in Utah (**Table 12**). The general fertility rate decreased for Puerto Rico and Northern Marianas in 2012, 3% and 15%, respectively, increased for Guam (9%), and was essentially unchanged for American Samoa and Virgin Islands.

The TFR declined from 2011 to 2012 for 21 states (Alabama, Alaska, California, Colorado, Connecticut, Delaware, Florida, Georgia, Illinois, Maryland, Massachusetts, Michigan, Mississippi, Missouri, Nevada, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, and Virginia), increased in 1 state (Idaho), and was essentially unchanged in the remaining 28 states and DC. TFRs ranged from 1,592.5 births per 1,000 women in Rhode Island, to 2,373.5 in Utah (**Table 12**). The TFR decreased for American Samoa, Puerto Rico and Northern Marianas in 2012, increased for Guam, and was essentially unchanged for Virgin Islands.

## Birth rates for teenagers by state

The birth rate for teenagers aged 15–19 declined between 2011 and 2012 in 29 states and DC and was essentially unchanged in the remaining 21 states (**Table B**). Declines ranged from 4% for Louisiana, to 15% for Delaware. The teen birth rates for the U.S. territories declined for Puerto Rico and Virgin Islands and were essentially unchanged for the remaining areas from 2011 to 2012.

Despite declines across all reporting areas in recent years, large differences in teen childbearing persist among the states (22-24). In 2012, teen births rates ranged from 13.8 in New Hampshire, to 47.5 in New Mexico (**Table 12**). The wide range in state-specific teen rates is consistent with patterns observed in previous analyses. In general, teen birth rates were lowest in the Northeast and highest across the South and Southwest. Differences in teen birth rates among race and Hispanic origin groups, noted earlier, contribute in part to the variation in state-specific teen birth rates (see "Age of mother").

## Births to unmarried women

The birth rate for unmarried women declined in 2012 for the fourth consecutive year. The rate fell 2% from 2011 to 2012, to 45.3 births per 1,000 unmarried women aged 15-44, the lowest rate since 2003 (**Tables C, 15, and 16**). The nonmarital birth rate was 13 percent lower in 2012 than in 2007 and 2008, when it was at its historic peak of 51.8 per 1,000.

The percentage of all births to unmarried women was 40.7 in 2012, essentially stable for the third consecutive year. The number of nonmarital births rose very slightly from 2011 (1,607,773) to 2012 (1,609,619). The 2012 total is 7% lower than the 2008 peak (**Table C**).

Birth rates for unmarried women fell in 2012 for women in ages groups under age 30; the rate was essentially unchanged for women 30-34 years, and increased to historic peaks for women 35 years of age and older. The steepest declines were for teenagers, particularly younger teens aged 15-17 years whose rate dropped by 8% from 2011 (14.9) to 2012 (13.7). Although the majority of nonmarital births are for women under age 25 (54% in 2012), this level has dropped from 64% in 2002 (25).

Nonmarital birth rates declined for all race and Hispanic origin population groups except API women, for whom the rate increased by 2%, from 22.4 in 2011 to 22.9 per 1,000 in 2012. Despite this increase, API women had the lowest rate of all race/Hispanic origin groups in 2012. Hispanic women had the highest nonmarital birth rate of all groups in 2012 (72.6) but also the largest percent decline between 2011 and 2012, a 3-percent drop (from 75.1 in 2011). Rates for non-Hispanic white women (32.1) and black women (62.6) fell 1% and 2%, respectively, in 2012. All race/Hispanic origin groups have experienced declines from the peak rates of 2007-2008, with the largest decline for Hispanic women, down 29 percent (from 102.1 in 2007).

While the percent of all births to unmarried women was down slightly in 2012 (40.7) from its peak of 41.0% in 2009, it was still more than twice the level in 1980, 18.4% (**Table C**). About nine out of ten births to teenagers 15-19 were nonmarital compared with about one in five for women in their thirties. Almost two-thirds of births to women 20-24 were nonmarital (64.8%), the age group with the highest number of nonmarital births (593,894).

The proportions of nonmarital births vary widely by race and Hispanic origin. In 2012, the percent of nonmarital births for non-Hispanic black (72%) and AIAN mothers (67%) was more than three times that of API mothers (17%) and more than twice that of non-Hispanic white mothers (29%). A little more than half (54%) of births to Hispanic mothers were to unmarried women. These proportions were essentially unchanged from 2011.

More than half of all births in DC, Louisiana, Mississippi, and New Mexico were to unmarried women in 2012 (**Table I-4**). Less than one in five births in Utah (18.7%) were to unmarried mothers, the lowest of any state. These geographic variations largely reflect compositional differences by race and Hispanic origin among states.

## Age of father

The 2012 **fertility rate of men** for the U.S. was 46.1 births per 1,000 men aged 15–54, unchanged from 2011 (46.1) (**Table 17**). Rates declined for all men under age 30 (down 6% for men aged 15–19, 4% for men aged 20–24, and 2% for men aged 25–29), rose for men aged 35–49 (up 2% for men aged 35–39 and 40-44 and 4% for men aged 45–49), and were unchanged for men aged 30-34 and 50 years and over. Rates for men aged 15–19 (13.8), 20–24 (58.3), and 25–29 (92.5) reached new record lows in 2012 (18).

Birth rates for white men declined less than 1% to 44.0 births per 1,000 men aged 15–54 between 2011 and 2012; the rate for black men declined 1% to 58.2 births per 1,000 men aged 15–54 — these rates were new record lows for both groups. Rates declined for white men in all age groups under 35 and black men in all age groups under 30, rose for white men aged 35-39 and 45-54 and black men aged 35-49, and were unchanged for the remaining age groups. Information on age of father is often missing on birth certificates of children born to women

under age 25 and to unmarried women. In 2012, age of father was not reported for 13% of all births, 23% of births to all women under age 25, and 30% of all nonmarital births. The procedures for computing birth rates by age of father that account for the missing data are described in the User Guide (13).

#### **Medical services utilization**

## Attendant at birth and place of delivery

The vast majority of births in the U.S. are delivered in hospitals. In 2012, 98.6% of all U.S. births occurred in hospitals. Doctors of medicine attended 85.8% of all hospital births, certified nurse midwives (CNMs) attended 7.6%, and doctors of osteopathy 6.0% (**Table 20**).

Out of hospital deliveries represented 1.4% of births in 2012. Of the more than 50,000 out of hospital births, about two-thirds (65.6%) occurred in a residence (home), and 29.0% occurred in a freestanding birthing center (**Table 20**). The number of births occurring at home, 35,184, was the highest since reporting began for this item in 1989. Older mothers, those 35 years and over are the most likely to have a home birth (26). Oregon reported the highest percentage of home births in 2012 (2.4%), with five other states at 2.0% or more (**Table D**). Six states and DC reported less than one-half of a percentage of births occurring at home; Louisiana had the lowest percentage of home deliveries (0.2%).

In 2012, CNMs attended 7.6% of all hospital births the same as 2011, but a 6% increase from 2005 (7.2%). The percentage of out-of-hospital births attended by CNMs also increased 6% over this period, from 28.6% in 2005, to 30.4% in 2012.

#### **Method of delivery**

In 2012, 32.8% of U.S. births were delivered by cesarean (**Table 21**), a rate that has remained unchanged since 2010. Prior to 2010, the cesarean delivery rate had increased every year since 1996 when about one fifth of births (20.7%) were delivered by cesarean.

Cesarean delivery rates were unchanged from 2011-2012 for all maternal age groups under 40 years (**Table 22**). Rates for women 40-54 increased 1% from 49.2 to 49.7%. As in prior years, cesarean delivery rates were higher for older mothers. One in 2 births to women aged 40-54 were delivered by cesarean compared with less than 1 in 4 births to women under age 20.

Changes in the cesarean delivery rate from 2011-2012 varied by race and Hispanic origin (**Table 21**). Rates increased for non-Hispanic black (from 35.5% to 35.8%) and Hispanic (32.0% to 32.2%) women. In contrast, the rate for non-Hispanic white women declined from 32.4% to 32.3%; rates for non-Hispanic white women have declined every year since 2009. Historically, Hispanic women have had lower cesarean delivery rates than non-Hispanic white and non-

Hispanic black women, however, in 2012, cesarean delivery rates for non-Hispanic white and Hispanic women were essentially the same. Non-Hispanic black women continued to have the highest rate of cesarean delivery.

Changes in cesarean delivery rates varied by state (**Table I-7**). For most states (35 and DC) the cesarean delivery rate remained unchanged from 2011 to 2012. Rates in 9 states were lower in 2012 than in 2011, decreasing an average of 2%. Rates for the remaining six states were higher in 2012 than in 2011, increasing an average of 4%. Cesarean delivery rates for 2012 ranged from 22.6% in Utah to 40.2% in Louisiana.

The American College of Obstetricians and Gynecologists has called for a reduction in the occurrence of nonmedically-indicated cesarean delivery and induction of labor prior to 39 weeks (27,28). Efforts to reduce such births include changes in hospital policy to disallow elective delivery prior to 39 weeks (29,30). The rate of cesarean delivery for all U.S. births delivered at less than 39 weeks peaked in 2009 at 38.3% and had declined every year since, reaching 37.5% in 2012 (**Figure 5**). Declines in the cesarean delivery rate among births at 38 weeks have driven this downward trend. From 2009 to 2012, the cesarean delivery rate at 38 weeks declined at least 2% each year, reaching 32.2% in 2012 (from 34.7% in 2009). In contrast, cesarean delivery among births at 39 weeks continued to *increase* at least 2% each year during this time. Changes at other gestational ages were less marked (data not shown). A recent report provides more detail on the recent trends in cesarean delivery at 38 and 39 weeks among singleton births (31).

Information for 2012 on primary cesarean and vaginal birth after cesarean delivery for the revised reporting area (38 states and DC) is presented in the User Guide (13). An upcoming report examines trends in primary cesarean delivery rates by state and for limited reporting areas (32).

Use of forceps and vacuum extraction to assist delivery has been declining since data on these methods have been available (**Table D**). In 2012, only 3.40% of births were assisted by forceps or vacuum extraction (down from 3.50% in 2011). In 1990, forceps and vacuum extraction assisted 9.01% of births. Vacuum extraction declined from 2.85% in 2011 to 2.79% in 2012. The use of forceps, declined from 0.65% in 2012 to 0.61% in 2012. Forceps have been used for less than 1% of births since 2005.

#### **Infant Health Characteristics**

## Period of gestation

The **preterm birth rate** declined to 11.55% in 2012, down 2% from 2011 (11.73%) and 10% from 2006 (12.80%); see **Tables E, 23, and 24**. The percentage of infants born preterm (less than 37 completed weeks of gestation) rose by more than 1/3 from 1981 to 2006, but is down each year 2007-2012. Declines from 2011 to 2012 were observed among infants born early

preterm (less than 34 weeks), from 3.44% to 3.41%, and among late preterm infants (34-36 weeks) from 8.28% to 8.13%. Since 2006, the early preterm rate is down 7% and the late preterm rate 11% (**Table E**).

Births delivered "early term" (37-38 weeks) were also down between 2011 and 2012 (**Table E**). The rate of births at 37 weeks of gestation declined 2% (from 8.71% in 2011 to 8.57% in 2012); births at 38 weeks were down 4% (from 17.16% to 16.39%) (Data for individual weeks not shown). Since 2006, births at 37 weeks have declined 10% and births at 38 weeks by 16%; see **Figure 6.** Concurrently, the percentage of infants delivered at 39 weeks (full term) rose 2% for 2011-2012, and by 17% from 2006 to 2012. Rates at 40 weeks (also full term) and 41 weeks (late term) have also risen over both time periods, but at a slower pace.

The preterm birth rate for singleton births only was 9.89% in 2012, down 2% from 2011 (10.05%) and 11% from 2006 (11.09%). Trends in gestational age among births in singleton deliveries are examined because multiples births have, on average, shorter gestations than singletons (see "Multiple births" section of this report) and can influence total trends in preterm birth. Singleton trends during 2006-2012 are similar to those summarized above for all births. That is, declines in births at less than 39 weeks and increases at full and late term deliveries (**Table E**). Efforts to reduce nonmedically indicated cesarean deliveries and labor inductions prior to 39 weeks may be in part associated with recent national declines in deliveries prior to 39 weeks (31,33,34). Reducing the incidence of these births is of public health importance because the risk of adverse perinatal outcome decreases with gestational age until 39-40 weeks (35,36).

Preterm birth rates declined among non-Hispanic white (from 10.50% to 10.29%) and non-Hispanic black (from 16.77% to 16.53%) infants from 2011 to 2012; the difference in the rate for Hispanic infants (11.65% to 11.58%) was not statistically significant (**Table 24**). The 2012 preterm rate among non-Hispanic black infants was 10% lower than the recent peak in 2006 (18.46%) and another record low. Since 2006, preterm levels have decreased 12% for non-Hispanic white and 5% for Hispanic infants.

From 2006 to 2012 preterm birth rates declined 9-12% among women in each 5-year age group 15 to 39 years; see Table 25 for 2012 data. In 2012 as in earlier years, preterm birth rates ranged widely by maternal age, from about 1 of ten births to women aged 25-34 years, to 1 out of 5 births to mothers aged under 15 years, and 1 of 4 births to mothers 45-54 years of age and older.

Fourteen states reported declines in preterm birth rates between 2011 and 2012; rates increased in two states and were unchanged in the remaining 34 states and the District of Columbia; see **Table I-8** for 2012 data. From 2006 to 2012, declines were observed in 44 states and the District of Columbia; rates in the remaining 6 states were essentially stable.

## **Birthweight**

The U.S. **low birthweight** rate (LBW) dipped 1% for 2012, to 7.99% from 8.10%, in 2011, and 3% lower than the 2006 high (8.26%). Following increases of nearly 20% from 1990 to 2006, the percentage of LBW infants (less than 2,500 grams or 5 pounds, 8 ounces) has slowly declined; see **Tables 23-25**. The percentage of moderately low birthweight infants (1,500-2,499 grams) declined for 2011-2012 from 6.66% to 6.57%, and is down from 6.77% in 2006. The rate of very low birthweight (less than 1,500 grams) also declined slightly from 1.44% in 2011 to 1.42% in 2012; this rate is down from 1.49% in 2006.

Weight at birth is closely associated with gestational age and as the gestational age distribution has shifted in recent years towards longer pregnancies (see section on "Gestational age") the birthweight distribution has also shifted slightly towards heavier babies. In addition to declines in infants born at less than 2,500 grams, the percentage of infants born at 2,500 to 2,999 grams (5 pounds, 9 ounces to 6 pounds, 9 ounces) is also down, from 18.44% to 18.28% from 2006 to 2012. Over this period, the percentage of infants delivered at 3,000 grams or greater increased from 73.30% to 73.73%; see **Table F**.

The lower the infant's weight at birth, the greater the risk of poor pregnancy outcome. For 2010, 22% of infants born at less than 1,500 grams did not survive their first year, compared with just over 1% of moderately LBW infants, and 0.2% of infants born at 2,500 grams and greater (35). Even infants weighing between 2,500-2,999 grams are at twice the risk of early death than heavier infant (37).

LBW declined among non-Hispanic white infants from 7.09% to 6.97% from 2011 to 2012 and also among non-Hispanic black births (from 13.33% to 13.18%), but was essentially unchanged for Hispanic births (6.96% in 2012) (**Table 24**). Since 2006, the LBW rate has declined 5% among non-Hispanic white, and 6% for non-Hispanic black infants; rates for Hispanic infants have fluctuating only slightly. Levels of very low birthweight were essentially stable from 2011 to 2012 for non-Hispanic white (1.13% for 2012) and non-Hispanic black infants (2.93%), but are down for both groups from highs reported for 2005. Very low birthweight levels for Hispanic infants have been generally stable from 2006 to 2011.

The percentage of LBW infants born in singleton deliveries also declined slightly between 2011 and 2012, from 6.32% to 6.26%. The singleton LBW rate rose 10% from 1990 (5.90%) to 2006 (6.49%), but is down 4% from the 2006 high. Overall LBW levels are influenced by changes in the rate of multiple births, which are much more likely to be LBW than infants born in singleton deliveries; see "Multiple births."

During 2006-2012, declines in the percentage of LBW infants were reported for 25 states and the District of Columbia– levels for the remaining states were not statistically changed. See **tables I-9 and I-10** for state-specific VLBW and LBW rates for 2012.

## Multiple births

The **twin birth rate** was stable at 33.1 per 1,000 births for 2012, essentially unchanged from 2010 and 2011. The twinning rate (births in twin deliveries per 1,000 total births) rose steady from 1980 to 2009 (from 18.9 to 33.2 per 1,000), but has fluctuated only from 33.2 to 33.1 since (**Tables 26 and 27**). **The number of infants born in twin deliveries** was 131,024 in 2012, the lowest number in almost a decade (2003), but still nearly twice as high as the number of twins delivered in 1980 (68,339) (**Table 27**).

Twinning rates were stable from 2011 to 2012 among non-Hispanic white (36.8 per 1,000 for 2012) and non-Hispanic black women (36.9), but declined among Hispanics (from 23.1 to 22.6). Following rises from 1990 to 2009 (up 62% for non-Hispanic white women, 42% for non-Hispanic black, and 25% for Hispanic women), twin birth rates have fluctuated fairly modestly among all three groups (**Table 27**).

The **triplet and higher-order multiple birth rate** (triplet/+) declined 9% from 2011 to 2012, to 124.4 per 100,000 births, and the lowest rate in eighteen years (**Figure 1**). The triplet/+ rate (number of triplets, quadruplets, and quintuplets and other higher-order multiples per 100,000 births) rose more than 400% from 1980 to 1998, but has since fallen by more than 1/3 (**Tables 26 and 27**). The number of triplet/+ births also declined 9% in 2012, to 4,919, the lowest number of triplets/+ since 1994; see **Table G.** The 2012 triplet/+ number included 4,598 triplets, 276 quadruplets and 45 quintuplets and higher order multiple births.

Recent declines in triplet/+ birth rates may be associated with guidelines from the American Society for Reproductive Medicine developed to reduce the incidence of higher-order multiple gestation pregnancies resulting from assisted reproductive technologies (ART) (38,39,40) and also with improvements in ART procedures (39). Infants born in multi-gestation pregnancies tend to born smaller and sooner than singletons (17) and are at higher risk of early death (35) compared with infants in singleton pregnancies. In 2010, the latest year for which mortality data are available, twins were more than 4 times, triplets 10 times and quadruplets more than 20 times as likely to die in infancy (35,37).

The rate of triplet/+ births declined 11% for 2011-2012 for non-Hispanic white women (from 171.0 to 152.9 per 100,000) and Hispanic women (from 78.7 to 70.1); the difference for non-Hispanic black women (108.9 to 107.8) was not statistically significant (**Table 27**). Differing trends in triplet/+ births are observed for 1998-2012 by race and Hispanic origin -- whereas large declines are seen among non-Hispanic white women (down 42%), rates for non-Hispanic black

women have fluctuated but trended upward (23% rise), and those for Hispanic women have fluctuated fairly narrowly (75.3 in 1998 and 70.1 in 2012).

Since 1998, when the total triplet/+ birth rate peaked, age-specific rates have declined by at least 30% for women in age groups 25 years and over with the largest decline among women 45 years of age and older (from 2326.8 per 100,000 in 1998 to 812.2 in 2012 (**Table 26**; 1998 data not shown). As in earlier years, triplet/+ rates ranged widely by maternal age, from 14 per 100,000 for teenaged mothers to more than 200 for mothers 35 years and older in 2012.

State-specific rates of multiple births vary widely; see **Table I-11**. For combined years 2010-2012, more than 4.0% of all births in Connecticut, New Jersey and Massachusetts were twins, compared with 2.6% of births in New Mexico. The highest incidence of triplet/+ births for this period was in North Dakota (194.9 per 100,000), three times as high as in New Mexico (58.4).

#### **List of Detailed Tables**

## Report tables

- 1. Births and birth rates, by race: United States, specified years 1940-1955 and each year 1960-2012
- 2. Births, by age of mother, live-birth order, and race of mother: United States, 2012
- 3. Birth rates, by age of mother, live-birth order, and race of mother: United States, 2012
- 4. Birth rates, by age of mother: United States, 1970-2012, and by age and race of mother: United States, 1980-2012
- 5. Births and birth rates, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989-2012
- 6. Births, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2012
- 7. Birth rates, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2012
- 8. Birth rates, by age and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989-2012
- 9. Birth rates, by live-birth order and race and Hispanic origin of mother: United States, 1980-2012
- 10. Births, by race of mother: United States, each state and territory, 2012
- 11. Births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, each state and territory, 2012
- 12. Birth rates, by age of mother: United States, each state and territory, 2012
- 13. Selected demographic characteristics of births, by race of mother: United States, 2012
- 14. Selected demographic characteristics of births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2012
- 15. Births and birth rates for unmarried women, by age, race and Hispanic origin of mother: United States, 2012
- 16. Birth rates for unmarried women, by age of mother: United States, 1970, 1975, and 1980-
- 2011, and by age and race and Hispanic origin of mother: United States, 1980-2012
- 17. Birth rates, by age and race of father: United States, 1980-2012
- 18. Selected medical and health characteristics of births, by race of mother: United States, 2012
- 19. Selected medical and health characteristics of births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2012
- 20. Births, by attendant, place of delivery, and race and Hispanic origin of mother: United States, 2012
- 21. Births, by method of delivery and Hispanic origin of mother: United States, 1989-2012
- 22. Births, by method of delivery by age and race and Hispanic origin of mother: United States, 2012

- 23. Births, by birthweight, gestational age, and race and Hispanic origin of mother: United States, 2012
- 24. Very preterm and preterm births, and very low birthweight and low-birthweight births, by race and Hispanic origin of mother: United States, 1981-2012
- 25. Preterm and low birthweight births, by age and race and Hispanic origin of mother: United States, 2012
- 26. Births, by plurality, age, and race and Hispanic origin of mother: United States, 2012
- 27. Twin and triplet and higher-order multiple births, by race and Hispanic origin of mother: United States, 1980-2012

## Internet tables (Available from:)

- I–1. Mean age of mother, by live-birth order and race and Hispanic origin of mother: United States, 1980-2012
- I–2. Births and seasonally adjusted birth rates, by month: United States, 2012
- I–3. Births, by day of week and method of delivery: United States, 2012
- I–4. Births to unmarried women, by race and Hispanic origin of mother: United States, each state and territory, 2012
- I–5. Births, by weight gain of mother during pregnancy, by plurality, gestational age, and race and Hispanic origin of mother: United States, 2012
- I–6. Selected risk factors, obstetric procedures, characteristics of labor and delivery, and congenital anomalies, by age and race and Hispanic origin of mother: United States, 2012
- I–7. Cesarean delivery, by race and Hispanic origin of mother: United States, each state and territory, 2012
- I–8. Preterm births, by race and Hispanic origin of mother: United States, each state and territory, 2012
- I–9. Low birthweight births, by race and Hispanic origin of mother: United States, each state and territory, 2012
- I–10. Very-low birthweight births, by race and Hispanic origin of mother: United States, each state and territory, 2012
- I–11. Twin, and triplet and higher-order multiple births, by state: United States and each state, 2007-2012

# Technical Notes Data source

Data shown in this report for 2012 are based on 100% of the birth certificates filed in all states and the District of Columbia (DC). The data are provided to the Centers for Disease Control and Prevention's National Center for Health Statistics (NCHS) through the Vital Statistics Cooperative Program (VSCP). Information on the percentage of records with missing information for maternal and infant characteristics included in this report is shown by state in Table I. Methodological and measurement information for these characteristics is available in the "2012 User Guide for the Natality Public Use File" (13).

## 1989 and 2003 revisions of the U.S. Standard Certificate of Live Birth

This report includes 2012 data on items that are collected on both the 1989 revision of the U.S. Standard Certificate of Live Birth (unrevised) and the 2003 revision (revised). The 2003 revision is described in detail elsewhere (5,6). Thirty-eight states, DC, and three territories implemented the revised birth certificate as of January 1, 2012: California, Colorado, Delaware, the District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Washington, Wisconsin, Wyoming, Guam, the Northern Marianas and Puerto Rico. The 38 revised states and DC represent 86% of all 2012 U.S. births. One state (Virginia) implemented the revised birth certificate in 2012, but after January 1.

This report presents information on selected data items comparable between the 1989 and 2003 birth certificate revisions. Information on topics comparable between revisions but not presented in this report (e.g., day of birth, month of birth, and congenital anomalies) can be found in the Internet Tables and in the "Public use file" for each data year (4). Information on key data items not comparable between the 1989 and 2003 birth certificate revisions—educational attainment, prenatal care, tobacco use during pregnancy, and type of cesarean and vaginal delivery—is included in the User Guide (13) for revised states. Beginning with the 2011 data file, data for these key, non-comparable items for unrevised states are no longer included in the natality public-use data file. Recent reports and data releases present 2009, 2010, and 2011 information on items not previously available from NCHS (e.g., use of infertility therapies, WIC food, source of payment for the delivery, maternal morbidity, and breastfeeding). Information on these items as well as other items that are exclusive to the 2003 birth certificate revision (e.g., pre-pregnancy diabetes, gestational diabetes, external cephalic version, epidual/spinal anesthesia, and trial of labor) are presented in the User Guide (13). Beginning with the 2007 data file, items exclusive to the 1989 certificate revision (e.g., maternal anemia, ultrasound, and alcohol use) are not included in the natality public-use data files.

## Age of mother

Age of mother is computed in most cases from the mother's and infant's dates of birth as reported on the birth certificate. The mother's age is directly reported by one state (Virginia, before April, 2012) and territory (American Samoa). From 1964 through 1996, mother's age was edited for a range of 10–49 years. Births reported as occurring to mothers under age 10 or over age 49 are assigned the average age of mothers based on a previous year with the same race, Hispanic origin, and total birth order (total of live births and fetal deaths). Beginning in 1997, age of mother was imputed for ages 9 and under and 55 and over. This procedure was used through 2006 for births in states using the 1989 certificate. Beginning in 2003 for births occurring in revised states, a wider age range has been used—age of mother is imputed for ages 8 and under and 65 and over (mothers aged 9 are recoded as aged 10). Starting in 2007, the same procedures have been used for states using the 1989 certificate. A review and verification of unedited data for several years including 2007 showed that the vast majority of births reported as occurring to women aged 50 and over were to women aged 50–54. In this report, the final age group shown in the tables (45-49, 45-54, or 50-54) includes births to mothers up to age 64.

The numbers of births to women aged 50 and over have been too small historically to compute age-specific birth rates. These births have been included with births to women aged 45–49 for computing birth rates. In 2012, age of mother was not reported on 0.01% of the records (by occurrence); for these records, age of mother was imputed according to the last record with the same race and total birth order.

## Hispanic origin and race

## Hispanic origin

Hispanic origin and race are reported separately on the birth certificate. Data are shown in most cases for five specified Hispanic groups: Mexican, Puerto Rican, Cuban, Central and South American, and other and unknown Hispanic. In tabulations of birth data by race and Hispanic origin, data for persons of Hispanic origin are not further classified by race because the vast majority of births to Hispanic women are reported as white. In tabulations of birth data by race only, data for persons of Hispanic origin are included in the data for each race group according to the mother's reported race. In tabulations that include Hispanic origin, data for non-Hispanic persons are classified according to the race of the mother, due to substantial differences in fertility and maternal and infant health characteristics between Hispanic and non-Hispanic white women.

Items asking for the Hispanic origin of the mother and the father have been included on the birth certificates of all states, DC, Virgin Islands, and Guam since 1993, and on the birth certificate of

Puerto Rico starting in 2005 and Northern Marianas starting in 2010 (13). American Samoa does not collect this information.

The Hispanic origin question on the 2003 revision of the birth certificate asks respondents to select only one response. Occasionally, however, more than one Hispanic origin response is given, that is, a specified Hispanic group (Mexican, Puerto Rican, Cuban, or Central and South American) in combination with one or more other specified Hispanic groups. When this occurs, all responses are collected. In 2012, 0.4% of births in the revised-state reporting area and in Rhode Island (unrevised states that also reported more than one Hispanic origin response) were to women reporting more than one Hispanic origin. Respondents who select more than one Hispanic origin on the birth certificate are classified as "other Hispanic." These procedures have been in place since the first revision year, 2003. The Hispanic origin question on the 1989 revision of the birth certificate also offers the opportunity to report more than one origin; however, NCHS processing guidelines for unrevised data allow only for coding the first Hispanic origin listed.

Women who report more than one Hispanic origin on the 2003 revised birth certificate are included in the category "other and unknown Hispanic;" however, the American Community Survey (ACS) (41), on which the 2012 population denominators are based, randomly assigns respondents who report more than one Hispanic origin to a single origin only. (The Current Population Survey (CPS), on which the population denominators before 2010 are based, queried respondents who report more than one Hispanic origin to obtain a single origin only (42)). As a result, the population-based rates shown in this report for "other Hispanic" women are higher (about 6%) than if births to women reporting more than one Hispanic origin were excluded from this category.

Change in births to other and unknown Hispanic women—The number of births to other and unknown Hispanic women increased 3%, from 131,060 in 2011 to 135,482 in 2012. This number rose each year from 2005 through 2012. Factors that may have influenced this rise are not clear, but may include less specificity in respondent reporting of Hispanic origin (e.g., "Hispanic" in lieu of "Mexican" or "Puerto Rican"), increases in the number of multiple-Hispanic reporting areas, and increases in the populations of groups included in the "other Hispanic" category.

The 38 revised states, DC, and Rhode Island accounted for 89% of Hispanic births in the United States in 2012. The percentage of records for which Hispanic origin of the parents was not reported in 2012 is shown by state in Table I. For additional information on the reporting of Hispanic origin, see the User Guide (13).

Single, multiple, and "bridged" race of mother and father

In 1997, the Office of Management and Budget (OMB) issued "Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity," which revised the 1977 "Race and Ethnic Standards for Federal Statistics and Administrative Reporting" (14,43). These documents specify guidelines for collecting, tabulating, and presenting race and ethnicity data within the federal statistical system. The 1997 revised standards incorporated two major changes designed to reflect the changing racial and ethnic profile of the United States. First, the revision increased from four to five the minimum set of categories to be used by federal agencies for identification of race. The 1977 standards required federal agencies to report race-specific tabulations using a minimum set of four single-race categories: American Indian or Alaska Native (AIAN), Asian or Pacific Islander (API), black, and white. The five categories for race specified in the 1997 standards are: AIAN, Asian, black or African American, Native Hawaiian or Other Pacific Islander (NHOPI), and white. The revised standards called for reporting Asian persons separately from NHOPI persons. Second, the revised standards also require federal data collection programs to allow respondents to select one or more race category.

Beginning with the 2000 decennial census, the U.S. Census Bureau collected race and ethnicity data in accordance with the 1997 revised standards; however, the National Vital Statistics System, which is based on data collected by the states, will not be fully compliant with the new standards until all of the states revise their birth certificates to reflect the new standards. Thus, beginning with the 2000 data year, the numerators (births) for birth rates are incompatible with the denominators (populations); see "Population denominators." To compute rates, it is necessary to "bridge" population data for multiple-race persons to single-race categories. This has been done for birth rates by race presented in this report. Once all states revise their birth registration systems to be compliant with the 1997 OMB standards, the use of bridged populations can be discontinued.

Forty-one states and DC, which represent 90% of all U.S. resident births, reported multiple-race data in 2012. Multiple-race reporting areas include: the thirty-nine revised or partially revised states (see "The 1989 and 2003 U.S. Standard Certificates of Live Birth"), District of Columbia, Guam, and Northern Marianas, which used the 2003 revision of the U.S. Standard Certificate of Live Birth, as well as Hawaii and Rhode Island, which used the 1989 revision of the U.S. Standard Certificate of Live Birth but which collected multiple-race data comparable to data of the states using the revised certificate. Puerto Rico, which revised its birth certificate in 2005, reported race according to the 1989 certificate revision.

Slightly more than 2% of mothers in the states reported more than one race (13). Prior to 2012, the multiple-race reporting states varied; 6 states reported more than one race in 2003, 15 states in 2004, 19 states in 2005, 23 states in 2006, 27 states in 2007, 30 states in 2008, 33 states and DC in 2009, 38 states and DC in 2010, and 40 states and DC in 2011.

Data from the vital records of the remaining 9 states and 2 territories followed the 1977 OMB standards in which only a single race is reported (43). In addition, these areas also reported the minimum set of four races as stipulated in the 1977 standards compared with the minimum of five races for the 1997 standards.

To provide uniformity and comparability of data during the transition period before multiple-race data are available for all reporting areas, bridging the responses of those who reported more than one race to a single race is necessary. The bridging procedure for multiple-race mothers and fathers is based on the procedure used to bridge multiracial population estimates; see "Population denominators" (44). Multiple race is imputed to a single race (AIAN, API, black, or white) according to the combination of races, Hispanic origin, sex, and age of the mother or father indicated on the birth certificate. The imputation procedure is described in detail elsewhere (45,46).

Where race of the mother is not reported, if the race of the father is known, the race of the father is assigned to the mother. When information is not available for either parent, the race of the mother is imputed according to the specific race of the mother on the preceding record with a known race of mother; see the User Guide (13). In 2012, race of mother was imputed for 5.8% of births (by occurrence).

Beginning with the 1989 data year, NCHS started tabulating its birth data primarily by race of mother. In 1988 and prior years, births were tabulated by race of child, which was determined from the race of the parents as entered on the birth certificate (13).

Trend data by race shown in this report are by race of mother for all years beginning with the 1980 data year. Text references to white births and white mothers or to black births and black mothers are used interchangeably for ease in writing.

For detailed information and discussion on race of mother and father, see the User Guide (13).

# Marital status, attendant and place of birth, pregnancy risk factors, method of delivery, and gestational age

For information and discussion on data quality of attendant and place of birth, pregnancy risk factors, method of delivery, and gestational age, see the User Guide (13).

## **Birthweight**

Birthweight is reported in some areas in pounds and ounces rather than in grams; however, the metric system has been used in tabulating and presenting the statistics to facilitate comparison with data published by other groups. Equivalents of the gram weights in terms of pounds and ounces are presented below:

Less than 500 grams = 1 lb. 1 oz. or less

```
500–999 grams = 1 lb. 2 oz.–2 lb. 3 oz.

1,000–1,499 grams = 2 lb. 4 oz.–3 lb. 4 oz.

1,500–1,999 grams = 3 lb. 5 oz.–4 lb. 6 oz.

2,000–2,499 grams = 4 lb. 7 oz.–5 lb. 8 oz.

2,500–2,999 grams = 5 lb. 9 oz.–6 lb. 9 oz.

3,000–3,499 grams = 6 lb. 10 oz.–7 lb. 11 oz.

3,500–3,999 grams = 7 lb. 12 oz.–8 lb. 13 oz.

4,000–4,499 grams = 8 lb. 14 oz.–9 lb. 14 oz.

4,500–4,999 grams = 9 lb. 15 oz.–11 lb. 0 oz.

5,000 grams or more = 11 lb. 1 oz. or more
```

## Computations of percentages, percent distributions, and means

For information and discussion on computations of percentages, percent distributions, and means, see the User Guide (13).

## **Population denominators**

## 2012 population estimates

The birth and fertility rates for 2012 shown in Tables A, B, C, 1, 3–5, 7–9, 12–14, and 17 are based on populations estimated from the 2010 census as of July 1, 2012. These populations are shown in Table II. The population estimates have been provided by the U.S. Census Bureau (47), and they are based on the 2010 census counts by age, sex, and race, which have been modified for consistency with 1977 OMB race categories and historical categories for birth data. The modification procedures are described in detail elsewhere (44).

The birth and fertility rates by state shown in Table 12 are based on state-level population counts, which are based on the 2010 census provided by the U.S. Census Bureau (47). Birth and fertility rates for the territories except Puerto Rico shown in Table 12 are based on population estimates provided by the U.S. Census Bureau's International Data Base (48). [Rates for Puerto Rico are based on population estimates from the 2010 census as of July 1, 2012, and are provided by the U.S. Census Bureau (49)].

Rates by state and territory shown in this report may differ from rates computed on the basis of other population estimates; rates for smaller population subgroups, such as those for teen mothers, may be particularly affected by differences in population estimates. Birth and fertility rates by month shown in Table I–2 are based on monthly population estimates for 2012, which are also based on 2010 census estimates. Rates for unmarried women shown in Tables 15 and 16 are based on distributions of the population by marital status averaged over a 3-year period for 2011–2013. These distributions were reported by the U.S. Census Bureau in the March CPS for

each year (50-52), and have been adjusted to July 1, 2012 (2010 census) population levels (47) by NCHS' Division of Vital Statistics (DVS) (53).

## Population estimates for the specific Hispanic groups

Beginning in 2011, birth and fertility rates for the Hispanic population groups (Mexican, Puerto Rican, Cuban, Central and South American, and other Hispanic populations) shown in Tables 5, 7, 8, and 14 are based on population estimates derived from the 1-year ACS (54), and are adjusted to the U.S. resident population control totals by the U.S. Census Bureau. Rates for the specific Hispanic population groups prior to 2010 shown in this report are based on population estimates derived from CPS, and adjusted to the U.S. resident population control totals by the U.S. Census Bureau or by DVS (see "Revised population estimates"). The switch to the ACSbased rates was made because ACS estimates are more statistically reliable and represent the entire U.S. population. ACS estimates are based on an approximate 3 million annual sample of the U.S. population, including all households (civilian and military) and the institutionalized population (persons living in group quarters) (55). CPS estimates are based on an approximate 200,000 sample of the civilian noninstitutionalized U.S. population (56). The larger ACS sample makes it possible to show rates in this report in more detail than in previous years, especially for Cuban and Puerto Rican women. The 2012 population estimates are derived from the 2012 1year ACS and are adjusted according to the (2010-based) postcensal estimates of the total population for July 1, 2012. The 2010 and birth and fertility rates for the specific Hispanic population groups were also revised using ACS-based population estimates.

Total population estimates for Hispanic groups in 2012 are presented in Table II. More information about the populations for Hispanic groups is presented elsewhere (13).

## **Revised population estimates**

Birth and fertility rates by race for 2001–2009 shown in this report have been modified according to revised intercensal population estimates based on the 2000 and 2010 censuses, to provide more accurate rates for the period (57). A full series of revised rates by state, by livebirth order, and by age for 2001–2009 based on these revised population estimates is forthcoming. These revised rates may differ from the intercensal rates published in "Births: Final Data for 2010," the original rates published in "Births: Final Data for 2009," and earlier reports that were based on 2000 postcensal population estimates (58,59). Differences in the revised rates compared with intercensal rates are slight, and vary by age and race and Hispanic origin population group.

The populations by race used in this report were produced under a collaborative arrangement with the U.S. Census Bureau and are based on the 2010 census counts. Reflecting the new OMB guidelines issued in 1997, the 2010 census (and 2000 census) included an option for persons to

report more than one race as appropriate for themselves and household members (14). In addition, the 1997 OMB guidelines called for the reporting of Asian persons separately from NHOPI persons. In the 1977 OMB guidelines, data for API persons were collected as a single group (43). For the nonmultiple-race reporting areas (9 states, American Samoa, U.S. Virgin Islands, and Puerto Rico), birth certificates currently report only one race for each parent in the categories specified in the 1977 OMB guidelines (see "Hispanic origin and race"). In addition, birth certificate data for the states using the 1989 birth certificate revision do not report Asian persons separately from NHOPI persons. Thus, birth certificate data by race (the numerators for birth and fertility rates) currently are incompatible with the population data collected in the 2010 census (the denominators for the rates).

To produce birth and fertility rates for 1991 through 2012, the reported population data for multiple-race persons were bridged to single-race categories. In addition, the 2010 (and 2000) census counts were modified to be consistent with the 1977 OMB race categories, that is, to report the data for Asian and NHOPI persons as the combined category of API (47). The procedures used to produce the bridged populations are described in a separate publication (44).

Revised intercensal population estimates for the specified Hispanic groups from 2001 through 2009 used in this report are not currently available from the U.S. Census Bureau, and rates have been recalculated using intercensal population estimates prepared by DVS. The population estimates were produced by applying proportions derived from the 2000-based population estimates (according to year, sex, and age for the specified Hispanic population groups) to the 2010-based population of Hispanic females by age group, and by adjusting the sum of the population estimates to be consistent with the total population of Hispanic females by age (2010 based). These population estimates are available upon request from NCHS (Births@cdc.gov).

The population data used to compile birth and fertility rates by race and ethnicity shown in this report are based on special estimation procedures and are not actual counts. This is the case even for the 2000 and 2010 populations that are based on the 2000 and 2010 censuses. As a result, the estimation procedures used to develop these populations may contain some errors. Smaller populations, like AIAN, are likely to be affected much more than larger populations by potential measurement error (44). Although the nature and magnitude of error is unknown, the potential for error should be considered when evaluating trends and differentials. As more accurate information becomes available, further revisions to the estimates may be necessary. For additional information and discussion on the population denominators, see the User Guide (13).

## **Computation of rates**

For information and discussion on computations of rates, see the User Guide (13).

## Random variation and significance testing for natality data

For information and discussion on random variation and significance testing for natality data, see the 2010 User Guide (13).

For information and discussion on random variation and significance testing for birth and fertility rates for Mexican, Puerto Rican, Cuban, Central and South American, and other Hispanic populations based on ACS population estimates, see the User Guide (13).

#### **Definitions of medical terms**

For definitions and discussion of maternal and infant health characteristics, see "Guide to Completing the Facility Worksheets for the Certificate of Live Birth and Report of Fetal Death" (60).

This report was prepared under the general direction of Delton Atkinson, Director of the Division of Vital Statistics (DVS), and Amy Branum, Chief of the Reproductive Statistics Branch (RSB). Nicholas F. Pace, Chief of the Systems, Programming, and Statistical Resources Branch (SPSRB); Steve J. Steimel, Annie S. Liu, and Li Lu provided computer programming support and statistical tables. Sharon Kirmeyer and Marie E. Thoma also provided statistical tables and content review. Steve J. Steimel and Annie S. Liu of SPSRB prepared the natality file. The Data Acquisition and Evaluation Branch staff of DVS evaluated quality of and acceptance procedures for the state data files on which this report is based. The Registration Methods staff of DVS consulted with state vital statistics offices regarding the collection of birth certificate data. This report was edited and produced by CDC/OSELS/NCHS/OD/Office of Information Services, Information Design and Publishing Staff: Danielle Woods edited the report; typesetting was done by ; and graphics were produced by

<sup>†</sup> Difference not statistically significant.

 $<sup>^{\</sup>rm l}$  Includes births to race and origin groups not shown separately, such as white Hispanic and black Hispanic women, and births with origin not stated.

<sup>&</sup>lt;sup>2</sup> Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with the 1977 Office of Management and Budget (OMB) standards. Forty-one states and the District of Columbia reported multiple-race data in 2012. The multiple-race data for these states were bridged to the single-race categories of the 1977 OMB standards for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2011 and 2012; see "Technical Notes."

 $<sup>^3</sup>$  Includes persons of Hispanic, non-Hispanic and origin not stated according to the mother's reported race; see "Technical Notes."

 $<sup>^{\</sup>rm 4}$  Includes all persons of Hispanic origin of any race; see "Technical Notes."

<sup>---</sup> Data not available.

NOTES: Population count estimates are based on the 2010 census; see "Technical Notes." Race categories are consistent with the 1977 Office of Management and Budget (OMB) standards. Multiple-race population estimates were bridged to the single race categories of the 1977 OMB standards for comparability with the birth data; see "Technical Notes." Population estimates for Mexican, Puerto Rican, Cuban, Central and Other Hispanic, which includes includes Central and South American and other and unknown Hispanic, are based on the American Community Survey adjusted to resident population control totals (the 2010-based population estimates for the United States for July 1, 2012). Population estimates for Hispanic total are based on the 2010 census, as of Juy 1, 2012. Population estimates by specified Hispanic origin in this table may not add to population estimates for total Hispanic. Standard errors are shown in parentheses below each population estimate.

SOURCE: U.S. Census Bureau. See references 47 and 54.

NOTE: This table will be updated to include 2012 population estimates for specified Hispanic origin groups when these are available.

<sup>1</sup> Persons of Hispanic origin are included for this race group.

<sup>2</sup> Persons of non-Hispanic origin may be of any race.

<sup>3</sup> Includes all persons of Hispanic origin of any race.

<sup>4</sup> Includes Central and South American and other and unknown Hispanic.

Table 1. Births and birth rates, by race: United States, specified years 1940-1955 and each year, 1960-2012

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15-44 years in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Beginning with 1970, excludes births to nonresidents of the United States]

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes." In this table all women, including Hispanic women, are classified only according to their race; see "Technical Notes."

<sup>\*</sup> Figure does not meet standards of reliability or precision; based on fewer than 20 births in numerator.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." In this table, all women, including Hispanic women, are classified only according to their race; see "Technical Notes."

<sup>0.0</sup> Quantity more than zero but less than 0.05.

Birth rates computed by relating births to women aged 45 years and over to women aged 45-49 years; see "Technical Notes."

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Birth rates are births per 1,000 women in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years]

- \* Figure does not meet standards of reliability or precision; based on fewer than 20 births in numerator.

  1 Beginning in 1997, birth rates are computed by relating births to women aged 45 years and over to women aged 45-49; see "Technical Notes."

  2 For 1970-1991 includes births to races not shown separately. For 1992 and later years, unknown race of mother is imputed; see "Technical Notes."

  3 Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states; see Reference 13.

  4 Based on a 50 percent sample of births.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes." In this table, all women, including Hispanic women, are classified only according to their race; see "Technical Notes."

Table 5. Births and birth rates, by Hispanic origin of mother and by race for mothers of non-Hispanic origin: United States, 1989-2012

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15-44 years in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey (ACS) estimates as of July 1 for 2010 to 2012; prior to 2010, populations for specified Hispanic groups based on Current Population Survey (CPS) estimates as of April 1 for census years and estimated as of July 1 for all other years]

<sup>---</sup> Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes." Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified by race; see "Technical Notes." This table will be updated to include rates for specified Hispanic origin groups when 2012 population data for these groups are available.

<sup>1</sup> Includes origin not stated.

Includes races other than white and black.

Excludes data for New Hampshire, which did not report Hispanic origin.

Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

Excludes data for Louisiana, New Hampshire, and Oklahoma, which did not report Hispanic origin.

Rates for the Central and South American population includes other and unknown Hispanic.

Table 6. Births, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2012

[Live-birth order refers to number of children born alive to mother. Includes births with stated origin of mother only]

<sup>-</sup> Quantity zero.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Fortyone states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see "Technical Notes."

<sup>1</sup> Includes races other than white and black.

Table 7. Birth rates, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2012

[Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15-44 years. Birth rates are births per 1,000 women in specified age and racial group. Populations estimated as of July 1. Live-birth order refers to number of children born alive to mother. Missing values for live-birth order not stated have been distributed]

- --- Data not available.
- 0.0 Quantity more than zero but less than 0.05.
- \* Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator or, for the Hispanic subgroups, a relative standard error for the rate of 23 percent or more; see Reference 13.
- Fertility rates computed by relating total births, regardless of age of mother, to women aged 15-44 years.
- 2 Birth rates computed by relating births to women aged 45 years and over to women aged 45-49 years; see "Technical Notes."
- 3 Includes Central and South American and other and unknown Hispanic.
- 4 Includes origin not stated.
- 5 Includes races other than white and black.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see "Technical Notes." This table will be updated to include rates for specified Hispanic origin groups when 2012 population data for these groups are available.

Table 8. Birth rates, by age and Hispanic origin of mother and by race for mothers of non-Hispanic origin: United States, 1989-2012

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Fertility rates are births per 1,000 women aged 15-44 years in specified racial group. Birth rates are births per 1,000 women in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey (ACS) estimates as of July 1 for 2010 to 2012; prior to 2010, populations for specified Hispanic groups based on Current Population Survey (CFS) estimates as of April 1 for census years and estimated as of July 1 for all other years]

Table 8. Birth rates, by age and Hispanic origin of mother and by race for mothers of non-Hispanic origin: United States, 1989-2012--Con.

[[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Fertility rates are births per 1,000 women aged 15-44 years in specified racial group. Birth rates are births per 1,000 women in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey (ACS) estimates as of July 1 for 2010 to 2012; prior to 2010, populations for specified Hispanic groups based on Current Population Survey (CFS) estimates as of April 1 for census years and estimated as of July 1 for all other years]

							Age of mot	ther				
Year and origin/race	Total fertility	Fertility			15	-19 years

--- Data not available.

\* Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator or, for the Hispanic subgroups, a relative standard error for the rate of 23 percent or more for the ACS-based rates of 2010-2011 or fewer than 50 women for census years and 75,000 women for noncensus years in the denominator for the CPS-based rates for 1989-2009; see Reference 13.

- Fertility rates computed by relating total births, regardless of age of mother, to women aged 15-44.
- Estinity Isles computed by relating total DITCHS, regardless of age of mother, to women aged 15-44. Beginning in 1997, birth rates computed by relating births to women aged 45 and over to women aged 45-49; see "Technical Notes." Excludes data for New Hampshire, which did not report Hispanic origin.
  Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.
  Excludes data for Louisiana, New Hampshire, and Oklahoma, which did not report Hispanic origin.
  Includes Central and South American and other and unknown Hispanic.
  Includes origin not stated.

- Includes races other than white and black.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes." Persons of Hispanic origin may be of any race. In this table, Hispanic owner are classified only by place of origin; non-Hispanic women are classified by race; see "Technical Notes." This table will be updated to include rates for specified Hispanic origin groups when 2012 population data for these groups are available.

Table 9. Birth rates, by live-birth order and race and Hispanic origin of mother: United States, 1980-2012

[Rates are births per 1,000 women aged 15-44 years. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Figures for live-birth order not stated are distributed]

Year and	race and Hispanic origin of mother	Fertility				-birth order

1</sup> Includes races other than white and black.

2 Includes origin not stated.

3 Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states; see Reference 13.

<sup>4</sup> Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Porty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2011, see "Technical Notes."

5 Excludes data for New Hampshire, which did not report Hispanic origin.

6 Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with the 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported mulitple-race data for 2012 that were bridged to the single-race categories for comparability with other states; see "Technical Notes." In this table, all women, including Hispanic women, are classified only according to their race; see "Technical Notes."

<sup>---</sup> Data not available.
- Quantity zero.
1 Excludes data for the territories.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see "Technical Notes."

Quantity zero.
 --- Data not available.
 Includes races other than white and black.
 Excludes data for the territories.

Table 12. Birth rates, by age of mother: United States, each state and territory, 2012

[By place of residence. Fertility rates are births per 1,000 women aged 15-44 years; total fertility rates are sums of birth rates for 5-year age groups multiplied by 5; birth rates by age are births per 1,000 women in specified age group estimated in each area. Populations estimated as of July

NOTE: Population data for computing birth rates were provided by the U.S. Census Bureau. Rates by state may differ from rates computed on the basis of other population estimates.

<sup>\*</sup> Figure does not meet standards of reliability or percision; birth rates based on fewer than 20 births.

<sup>1</sup> Birth rates computed by relating births to women aged 45 and over to women aged 45-49; see "Technical Notes."

<sup>2</sup> Excludes data for the territories.

Table 13. Selected demographic characteristics of births, by race of mother: United States, 2012

[Birth rates are births per 1,000 population. Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15-44 years. Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Populations estimated as of July 1. Mean age at first birth is the arithmetic average of the age of mothers at the time of birth, computed directly from the frequency of first births by age of mother]

<sup>---</sup> Data not available.

NOTES: For 49 states, the District of Columbia, and New York City marital status is reported in the birth registration process; for New York, mother's marital status is inferred; see Reference 13. Rates cannot be computed for unmarried non-Hispanic black women or for American Indian or Alaska Native women because the neccessary populations are not available.

<sup>1</sup> Includes origin not stated.

<sup>2</sup> Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Data for persons of Hispanic origin are included in the data for each race group according to the mother's reported race; see "Technical Notes." Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes."

<sup>3</sup> Includes all persons of Hispanic origin of any race.

<sup>4</sup> Birth rates computed by relating total births to unmarried mothers, regardless of age of mother, to unmarried women aged 15-44 years; see "Technical Notes."

<sup>5</sup> Birth rates computed by relating births to unmarried women aged 40 years and over to unmarried women aged 40-44.

Table 16. Birth rates for unmarried women, by age of mother: United States, 1970, 1975, and 1980-2012, and by age, race, and Hispanic origin of mother: United States, 1980-2012

[Rates are births to unmarried women per 1,000 unmarried women. Populations estimated as of July 1 for all years]

- 1 Rates computed by relating total births to unmarried mothers, regardless of age of mother, to unmarried women aged 15-44 years.
- 2 Beginning in 1997, birth rates computed by relating births to unmarried women aged 40 years and over to unmarried women aged 40-44 years; see "Technical Notes."
- 3 Includes races other than white, black, and Asian or Pacific Islander.
- 4 Data for states in which marital status was not reported have been inferred and included with data from the remaining states; see "Technical Notes."
- Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states; see Reference 13.

  Births to unmarried women are estimated for the United States from data for registration areas in which marital status of mother was reported; see Reference 25.
- 7 Based on a 50 percent sample of births. 8 Rates based on data for 48 states and the District of Columbia, which reported Hispanic origin on the birth certificate. Rates for age group 35-39 are based on births to unmarried women aged 35-44.
- 9 Includes all persons of Hispanic origin of any race.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes." Rates cannot be computed for unmarried non-Hispanic black women or for American Indian or Alaska Native women because the necessary populations are not available.

Table 17. Birth rates, by age and race of father: United States, 1980-2012

[Rates are births per 1,000 men in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Missing values for age of father not stated have been distributed]

Year and race of father	15-54 years 1	15-19 years 2	20-24 years	25-29 years	30-34 years	35-39 years	40-44 years	45-49 years	50-54 years	55 years and over

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." In this table, all men, including Hispanic men, are classified only according to their race; see "Technical Notes." Age of father was not stated for 12.8 percent of births in 2012. See reference 13 for information on the calculation of birth rates by age of father.

Rates computed by relating total births, regardless of age of father, to men aged 15-54 years.
 Rates computed by relating births of fathers under 20 to men aged 15-19.
 Includes races other than white and black.
 Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states; see Reference 13.

Table 18. Selected medical or health characteristics of births, by race of mother: United States, 2012

Characteristic	All races	White	Black	American Indian or Alaska Native	Asian or Pacific Islander
Mother			Percent		
Diabetes during pregancy	5.9	5.6	5.3	8.0	9.9
Weight gain of less than 11 lbs	8.5	7.8	12.9	12.3	6.0
Weight gain of more than 40 lbs	21.1	21.7	21.0	21.3	15.0
Induction of labor	22.8	23.6	21.7	21.6	17.0
CNM delivery 1	7.9	8.1	7.3	16.5	6.5

<sup>1</sup> Percent of all live births by cesarean delivery.

<sup>2</sup> Includes races other than white and black and origin not stated.

<sup>3</sup> Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes."

<sup>4</sup> Includes all persons of Hispanic origin of any race.

<sup>5</sup> Excludes data for New Hampshire, which did not report Hispanic origin.

<sup>6</sup> Excludes data for New Hampshire and Oklahoma, which did not report data by Hispanic origin. Oklahoma did not report method of delivery.

<sup>7</sup> Excludes data for Louisiana, Maryland, Nebraska, Nevada, and Oklahoma, which did not report method of delivery on the birth certificate; data by Hispanic origin also excludes New Hampshire, which did not report Hispanic origin.

<sup>1</sup> Percent of all live births by cesarean delivery.

<sup>2</sup> Includes races other than white and black and origin not stated.

<sup>3</sup> Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with the 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012. The multiple-race data for these states were bridged to the single-race categories of the 1977 Office of Management and Budget standards for comparability with other states; see "Technical Notes."

<sup>4</sup> Includes all persons of Hispanic origin of any race.

<sup>-</sup> Quantity zero.

0.0 Quantity more than zero but less than 0.05.

1 Equivalents of the gram weights in pounds and ounces are shown in the "Technical Notes."

2 Expressed in completed weeks.

Includes races other than white and black and origin not stated.

Includes races other than white and Diack and origin not stated.

Birthweight of less than 1,500 grams (3 lb 4 oz).

Birthweight of less than 2,500 grams (5 lb 8 oz).

Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes."

<sup>7</sup> Includes all persons of Hispanic origin of any race.

<sup>---</sup> Data not available.

Births of less than 32 completed weeks of gestation.

<sup>2</sup> Births of less than 37 completed weeks of gestation.

<sup>3</sup> Includes races other than white and black and origin not stated.

A Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes."

<sup>5</sup> Includes all persons of Hispanic origin of any race.

- 6 Data by Hispanic origin exclude New Hampshire, which did not report Hispanic origin.
- 7 Data by Hispanic origin exclude New Hampshire and Oklahoma, which did not report Hispanic origin.
- 8 Data by Hispanic origin exclude New Hampshire, Oklahoma, and Louisiana, which did not report Hispanic origin.
- 9 Less than 1,500 grams (3 lb. 4 oz.).
- 10 Less than 2,500 grams (5 lb. 8 oz.).

<sup>-</sup> Quantity zero.

 $<sup>\</sup>star$  Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator.

 $<sup>1\,</sup>$   $\,$  Includes races other than white and black and origin not stated.

<sup>2</sup> Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes."

<sup>3</sup> Includes all persons of Hispanic origin of any race.

<sup>4</sup> Triplet, quadruplet, quintuplet and higher order multiple deliveries.

Table 27. Twin and triplet and higher-order multiple births, by race and Hispanic origin of mother, United States: 1980-2012

Year and race and Hispanic origin of mother	Total births	Twin births	Triplet/+ births	Multiple birth rate /1	Twin birth rate /2	Triplet/+ birth rate /3

<sup>1/</sup> The number of live births in all multiple deliveries per 1,000 live births.

<sup>2/</sup> The number of live births in twin deliveries per 1,000 live births.

<sup>3/</sup> The number of live births in triplet and other higher-order deliveries per 100,000 live births.

<sup>4/</sup> Includes races other than white and black and origin not stated.

<sup>4/</sup> Includes races other than white and black and origin not stated.

5/ Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-one states and the District of Columbia reported multiple-race data for 2012 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Multiple-race reporting areas vary for 2003-2012; see "Technical Notes."

<sup>6/</sup> Excludes data for New Hampshire, which did not report Hispanic origin.

<sup>7/</sup> Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

<sup>8/</sup> Includes all persons of Hispanic origin of any race.
